

Overpopulation vs. Underpopulation: Insights from Total Fertility Rate Data (1960-2021)

Bradley Cardona

2023-06-28

Case Study Outline:

- Motivating Question: Which issue will be more significant in the coming decades, overpopulation or underpopulation?
- Hypothesis: In the coming decades, most countries will need to address an *underpopulation* problem – not an overpopulation one.
- Data set: For this case study, I used a data set from The World Bank. It contains a list of countries, in addition to their respective total fertility rates from 1960 to 2021.

Abstract:

- The Total Fertility Rate (TFR) is a measure of the average number of children that would be born to a woman over her lifetime if she were to experience the exact current age-specific fertility rates through her lifetime and were to live from birth until the end of her reproductive life. It is often said that the world is experiencing, or will experience an overpopulation problem. Due to the dramatic drop in TFRs across nearly every country for the last several decades, we hypothesize that most countries will need to address an underpopulation problem – not an overpopulation one.

Install required packages

```
library(tidyverse) # helps wrangle data
```

```
## -- Attaching core tidyverse packages ----- tidyverse 2.0.0 --
## v dplyr      1.1.2      v readr      2.1.4
## v forcats    1.0.0      v stringr   1.5.0
## v ggplot2    3.4.2      v tibble    3.2.1
## v lubridate  1.9.2      v tidyr     1.3.0
## v purrr      1.0.1
```

```
## -- Conflicts ----- tidyverse_conflicts() --
```

```
## x dplyr::filter() masks stats::filter()
```

```
## x dplyr::lag()     masks stats::lag()
```

```
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
```

```
library(lubridate) # helps wrangle date attributes
```

```
library(ggplot2)   # helps visualize data
```

```
library(readxl)    # helps read data from Excel files
```

```
library(scales)    # helps scale data, format labels, and create color palettes
```

```
##
```

```
## Attaching package: 'scales'
```

```
##
```

```
## The following object is masked from 'package:purrr':
```

```
##
```

```
##      discard
```

```
##
```

```
## The following object is masked from 'package:readr':
```

```
##
##      col_factor
library(dplyr) # helps manipulate data frames

getwd() # displays working directory

## [1] "/Users/bradleycardona/Documents/Repos/fertility_rates"
# set working directory to simplify calls to data
# setwd("~/Documents/data_analytics/fertility_rate_case_study/")
```

Step 1: Collect data

```
fertility_rates <- read_xls("fertility_rates.xls")
head(fertility_rates)

## # A tibble: 6 x 67
##   `Country Name` `Country Code` `Indicator Name` `Indicator Code` `1960` `1961`
##   <chr>          <chr>          <chr>          <chr>          <dbl> <dbl>
## 1 Aruba          ABW          Fertility rate,~ SP.DYN.TFRT.IN    4.82  4.66
## 2 Africa Eastern~ AFE          Fertility rate,~ SP.DYN.TFRT.IN    6.72  6.74
## 3 Afghanistan    AFG          Fertility rate,~ SP.DYN.TFRT.IN    7.28  7.28
## 4 Africa Western~ AFW          Fertility rate,~ SP.DYN.TFRT.IN    6.46  6.47
## 5 Angola          AGO          Fertility rate,~ SP.DYN.TFRT.IN    6.71  6.79
## 6 Albania         ALB          Fertility rate,~ SP.DYN.TFRT.IN    6.46  6.35
## # i 61 more variables: `1962` <dbl>, `1963` <dbl>, `1964` <dbl>, `1965` <dbl>,
## #   `1966` <dbl>, `1967` <dbl>, `1968` <dbl>, `1969` <dbl>, `1970` <dbl>,
## #   `1971` <dbl>, `1972` <dbl>, `1973` <dbl>, `1974` <dbl>, `1975` <dbl>,

```

```
# Find Total Fertility rate by Country Name in 1960 vs. 2021.
# Assign the result to avg_fertility_rate.
avg_fertility_rate <- aggregate(fertility_rates$"1960"
                               ~ fertility_rates$"2021"
                               + fertility_rates$"Country Name",
                               FUN = mean)
```

Step 5: Create figures

```
# Figure 1: Total Fertility Rate by Country (1960 vs. 2021)
ggplot(avg_fertility_rate, aes(x = `fertility_rates$"2021"`, y = `fertility_rates$"1960"`) +
  geom_point() +
  geom_smooth(method = "lm", se = FALSE) +
  xlab("Total Fertility Rate in 2021") +
  ylab("Total Fertility Rate in 1960") +
  ggtitle("Figure 1. Total Fertility Rate by Country (1960 vs. 2021)")

## `geom_smooth()` using formula = 'y ~ x'
```

Figure 1. Total Fertility Rate by Country (1960 vs. 2021)

Each data point in Figure 1 represents a different country. These data points suggest that there has been a considerable decrease in total fertility rates from 1960 to 2021. Let's now take a look at this trend on a region-by-region basis.

```
# Find unique country names in fertility_rates table
country_names <- unique(fertility_rates$`Country Name`)
sorted_country_names <- sort(country_names)
sorted_country_names
```

```

Figure 5 (North American Countries)

```
generate_plot("North America" , north_american_countries, fertility_rates, "Country Name",
              "~/Documents/data_analytics/fertility_rate_case_study/figures")
```

Figure 6 (South American Countries)

```
generate_plot("South America" , south_american_countries, fertility_rates, "Country Name",
              "~/Documents/data_analytics/fertility_rate_case_study/figures")
```

Figure 7 (Oceanic Countries)

```
generate_plot("Oceania" , oceanic_countries, fertility_rates, "Country Name",
              "~/Documents/data_analytics/fertility_rate_case_study/figures")
```

Now that we have an idea of the general trend for each region, let's aggregate these figures into one facet plot.

```
# Replace with the list of African countries
fertility_rates_africa <- fertility_rates %>%
  filter(`Country Name` %in% african_countries)

# Replace with the list of Asian countries
fertility_rates_asia <- fertility_rates %>%
  filter(`Country Name` %in% asian_countries)

# Replace with the list of European countries
fertility_rates_europe <- fertility_rates %>%
  filter(`Country Name` %in% european_countries)

# Replace with the list of North American countries
fertility_rates_north_america <- fertility_rates %>%
  filter(`Country Name` %in% north_american_countries)

# Replace with the list of South American countries
fertility_rates_south_america <- fertility_rates %>%
  filter(`Country Name` %in% south_american_countries)

# Replace with the list of Oceanic countries
fertility_rates_oceania <- fertility_rates %>%
  filter(`Country Name` %in% oceanic_countries)

# Combine the data for all regions into one data frame
fertility_rates_all_regions <- bind_rows(
  fertility_rates_africa %>% mutate(Region = "Africa"),
  fertility_rates_asia %>% mutate(Region = "Asia"),
  fertility_rates_europe %>% mutate(Region = "Europe"),
  fertility_rates_north_america %>% mutate(Region = "North America"),
  fertility_rates_oceania %>% mutate(Region = "Oceania"),
  fertility_rates_south_america %>% mutate(Region = "South America")
)

# Reshape the data from wide to long format
fertility_rates_long <- fertility_rates_all_regions %>%
  pivot_longer(cols = `1960`:`2021`,
    names_to = "Year",
    values_to = "Fertility_Rate")

# Create the plot with custom x-axis labels and facets
p1 <- ggplot(fertility_rates_long,
  aes(x = Year,
    y = Fertility_Rate,
    color = `Country Name`,
    group = `Country Name`)) +
  geom_line() +
  xlab("Year") +
  ylab("Fertility Rate") +
  ggtitle("Total Fertility Rate by Geographic Region (1960-2021)") +
  scale_x_discrete(breaks = seq(1960, 2021, by = 5)) +
  theme(axis.text.x = element_text(angle = 45, hjust = 1),
    legend.position = "none") +
  facet_wrap(~ Region)
```

p1

```
# Save the plot with the graphs to a file with a resolution of 400 dpi
ggsave("~/Documents/data_analytics/fertility_rate_case_study/figures/fertility_rates_all_regions_gra
      plot = p1,
      width = 10,
      dpi = 1000)
```

Saving 10 x 8 in image

This facet plot shows clearly a downward trend of total fertility rates in the last several decades; to make this data more interactive, let's create a Tableau dashboard.

Step 6: Export data, create Tableau dashboard

```
write.csv(fertility_rates_long,
          "~/Documents/data_analytics/fertility_rate_case_study/fertility_rates_all_regions.csv",
          row.names = FALSE)
```

Step 7: Explore Tableau dashboard

- [Click here to interactive with this case study's dashboard.](#)

Step 8: Identify pattern

The Tableau dashboard shows that, for nearly every country, there has been a sharp decrease in total fertility rates from 1960 to 2021. Let's quantify this result even further by finding the average percentage change in total fertility rate by country in each region from 1960 to 2021. If the average percentage change is positive for a given country, we will label it with a green circle; otherwise, we will label it with a red circle.

```
# Reshape the data from wide to long format
fertility_rates_long <- fertility_rates_all_regions %>%
  pivot_longer(cols = `1960`:`2021`,
               names_to = "Year",
               values_to = "Fertility_Rate")
```

```

# Replace spaces with underscores in column names
colnames(fertility_rates_long) <- gsub(" ", "_", colnames(fertility_rates_long))

# Add a pct_change column to the data frame
fertility_data <- fertility_rates_long %>%
  group_by(Country_Name) %>%
  mutate(pct_change = (Fertility_Rate - lag(Fertility_Rate)) / lag(Fertility_Rate) * 100) %>%
  ungroup()

plots <- fertility_data %>%
  group_by(Region, Country_Name) %>%
  summarise(mean_pct_change = mean(pct_change, na.rm = TRUE)) %>%
  ungroup() %>%
  split(.$Region) %>%
  map(~ .x[order(.x$mean_pct_change),] %>%
    ggplot(aes(x = reorder(Country_Name, mean_pct_change), y = mean_pct_change)) +
    geom_point(shape = 21, size = 3, aes(fill = ifelse(mean_pct_change > 0, "Above 0", "Below 0"))) +
    scale_fill_manual(values = c("Above 0" = "green", "Below 0" = "red")) +
    geom_hline(yintercept = 0, linetype = "dashed", color = "red") +
    theme(axis.text.x = element_text(angle = 90, hjust = 1), legend.position = "none") +
    labs(x = "Country Name", y = "Average Percentage Change in Total Fertility Rate", title = paste(

## `summarise()` has grouped output by 'Region'. You can override using the
## `.groups` argument.

# Print the plots
plots

```

```
## $Africa
```

```
##
## $Asia
```

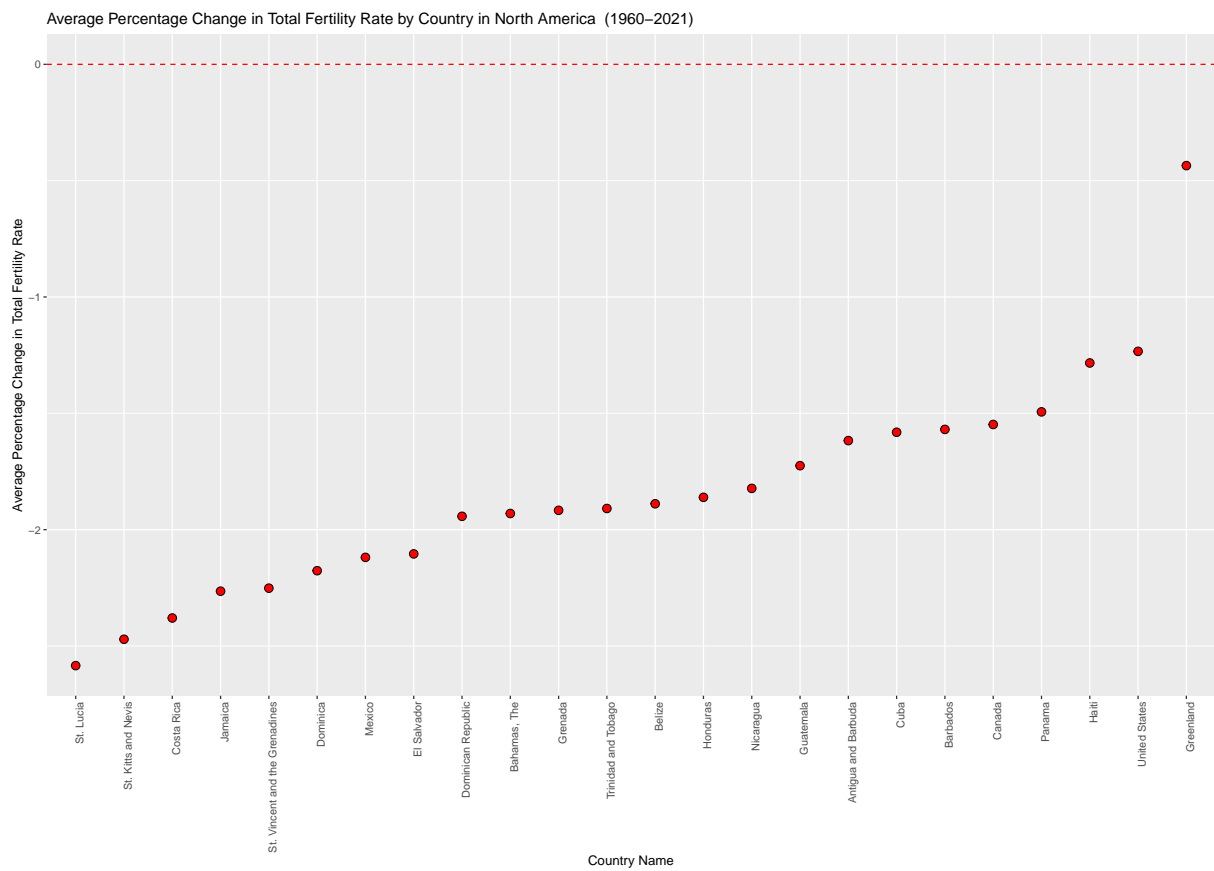

\$Europe

##

\$`North America`

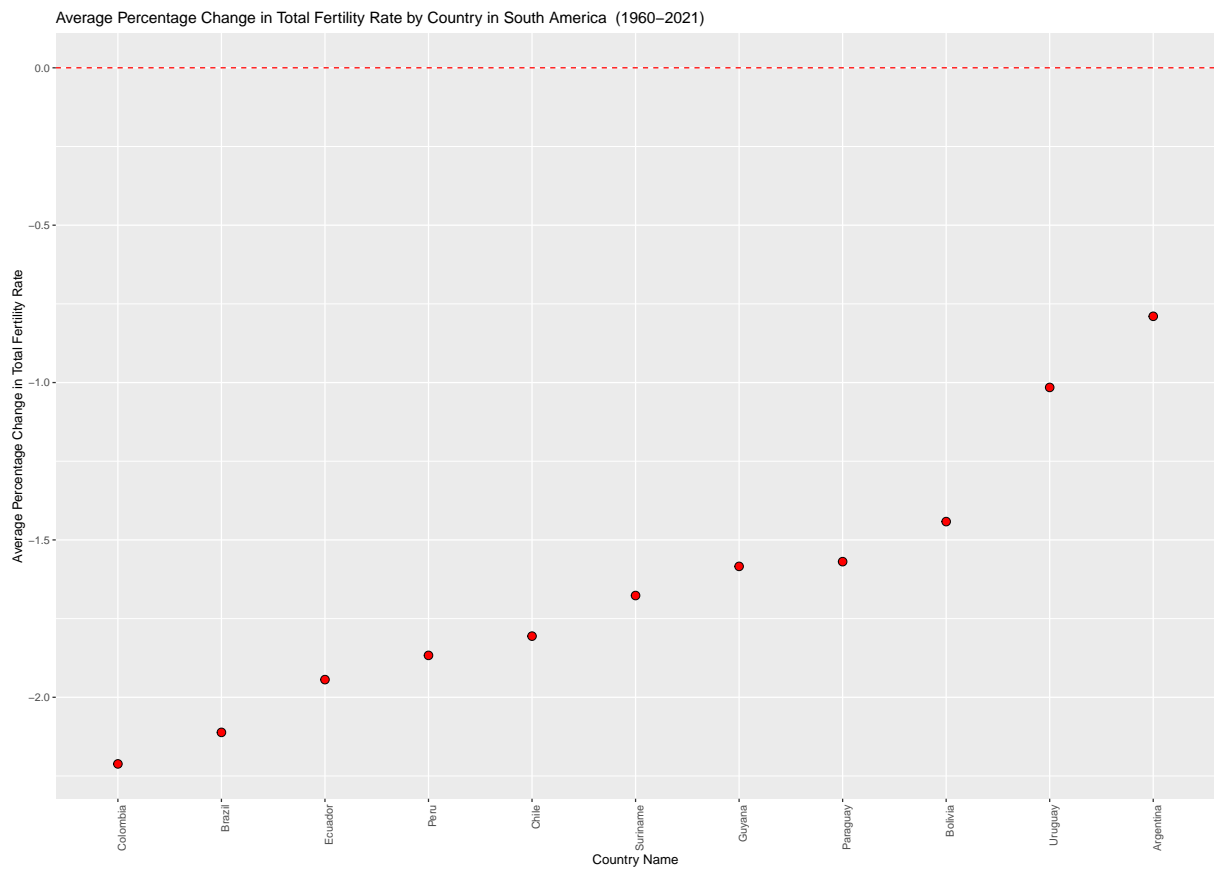

##

\$Oceania

##

\$`South America`

Conclusion: These figures show that that the average percentage change in total fertility rates is negative for nearly every country from 1960 to 2021. This supports our initial hypothesis that, in the coming decades, many countries will need to address an underpopulation problem – not an overpopulation one.
